

Latinos US – Formal Green Commitment Statement

At Latinos US, we understand that the well-being of our communities is inherently linked to the health of our planet. As a Latino-led organization committed to equity, cultural empowerment, and social transformation, we also embrace our shared responsibility to promote environmental sustainability.

We recognize that climate change disproportionately affects marginalized communities, including Latino populations in the United States, and that environmental justice is a fundamental dimension of social justice.

As part of our core values and operating principles, Latinos US formally commits to being a low-carbon, environmentally responsible organization that integrates sustainability into all aspects of its structure and activities.

Our commitments include:

- Operating as a fully digital platform, reducing the need for printed materials, physical infrastructure, and unnecessary resource consumption.
- Ensuring that our Ideario is developed, shared, and maintained in a 100% digital format—accessible, inclusive, and environmentally conscious.
- Minimizing our carbon footprint through remote collaboration, virtual events, and sustainable partnerships.
- Choosing service providers and technological platforms that align with low-energy usage and responsible environmental practices.
- Raising awareness within our community about the connection between climate justice and Latino equity, and promoting a culture of environmental accountability and shared care.

We believe that building a more just and united Latino community also means working for a more sustainable and livable planet.

A future that respects our people must also respect our environment.

Latinos US is a green, conscious, and future-facing organization, committed to action with integrity—for our communities and planet Earth.
